Combined unit for all seasons

Volvo Air Conditioning ... The quality unit for the quality car

Volvo Air Conditioning is different from many others, a combined unit that operates together with the heating system that is made for an air conditioner right from the factory.

The air conditioning system is designed to be trouble-free and insure a comfortable interior temperature in all seasons — in all climates.

All new adjustable thermostat

The new color-coded adjustable thermostat control serves as the ON/OFF switch and works independently of the heater slide control. The control has an inhibiting device set at 32°F to prevent freeze-up. However, for quick cooling when first beginning to drive or in city traffic, simply turn the rheostat clockwise past the inhibiting device. When quick cooling is achieved, turn the rheostat back to the regular temperature range — select the coolness desired — and presto — your Volvo Air Conditioner takes over to give you a cool, comfortable ride.

Volvo Air Conditioning year 'round . . . whatever the climate

The air conditioning unit was designed to fully integrate with Volvo's effective flow-through heating and ventilation system. By activating the push button air delivery switch, the air is regulated through twelve outlets to the windshield, front door windows, front and rear floor and along the dashboard. Plus you may mix the air with fresh air or recirculate the existing air in the car. By pushing the recirculation button (marked REC), you can have the air conditioner take in only about 10% of air volume from the outside and the rest from inside the car. The inside air is also cleaned, cooled, and dehumidified before being returned.

The Volvo Air Conditioner is just that . . . an air conditioner not just a "cooling machine".

Hot weather: During the "dog days", your Volvo Air Conditioner will be a welcome passenger indeed. It's "cool-down rate" is extremely fast. Once you achieve the cabin temperature desired, simply reset the thermostat; hit the "recirculate" button, and you will drive in an efficiently cooled environment. It's sensible; it's Volvo.

High pollen: The filtering feature of a Volvo Air Conditioner is nothing to sneeze at. A special wet filter, not only traps air borne pollutants and particles, but is an extremely effective barrier between you and pollen. If you or any member of your family is a hay fever sufferer, a Volvo Air Conditioner is a must.

Bright autumn day: On those gloriously crisp, sunny autumn days, you wouldn't think air conditioning is necessary. But many times it is. Bright sun light will sufficiently raise the temperature of the cabin to require some cooling. Most people will simply crack open a window. But Volvo owners are simply not "most people". In the first place, who needs wind noise created by a partially opened window?

All it takes is for you to activate your Volvo Air Conditioner, at a relatively moderate cooling setting and perhaps add a dash of heat and you will quickly find the ideal temperature that will allow you to thoroughly enjoy that autumn day.

Wet, cold, early winter: You know the kind of weather we mean . . . not quite cold enough for ear muffs, but the kind of day that seems to chill you to the bone. This is the kind of

weather that allows you to really appreciate Volvo Air Conditioning. The first thing you want is to wring the moisture out of the air; your Volvo Air Conditioner does that extremely fast. No damp doors, no foggy windows. Next, you want just enough warmth to be comfortable. Your Volvo heating system working with air conditioner makes for driving comfort that is unbelievable in this kind of miserable weather. It's the closest thing to creating the feeling of sitting in your own living room that automotive engineering can produce.

Volvo Air Conditioning . . . it works for your Volvo and you. Volvo Air Conditioning — engineered for comfort and trouble-free operation.

Quality engineering for trouble-free operation

Since the air conditioner is built especially for Volvo and fitted to work together with the heating and ventilating system, it is carefully tried and tested.

The whole system is tailor-made just for Volvo, which makes mounting easy. The cooling system is adapted, in construction and efficiency, so that everything works perfectly and problem-free for many years. After all, the system is used in a car that is built to last an unusually long time. Regardless if you order the car with air conditioning right away or have it installed at a later time, all the parts are especially constructed for the car and carefully tested. The air conditioner has the same high quality as the rest of the car. If you're into technical reasons why, Volvo Air Conditioner is better — see your dealer. He's got all the answers. The Volvo Air Conditioner is covered by Volvo's Twelve Month/Unlimited Mileage Warranty.
