

# VOLVO Ambulance

The Volvo 145 Express Ambulance.

A new presentation from our special vehicle range – the Volvo 145 Express Ambulance. This is a prototype model featuring a very advanced interior design and equipment for first-aid.

The basic design is that of the Volvo 145 Express with a 90 b.h.p. SAE engine and a 4-speed manual gearbox. Safety features are the triangle-split dual circuit brake system, the collapsible steering column and the adjustable head restraints — all examples of Volvos endeavour to increase, road safety. The excellent running economy, good performance and functional comfort give a car which can stand any amount of rough treatment. The Volvo 145 Express Ambulance is equipped with a new special stretcher which can be adjusted in a number of ways to give correct lying angles for heart trouble patients and persons suffering from shock.

An extra folding stretcher is also included. The ambulance is very spacious and has a lifted roof-line to give greater head clearance. Storage lockers are also fitted for all necessary equipment, and space is available for phlegm pump, oxygen and laughing gas equipment. Extra interior lighting. Extra heating unit in patient area as optional. Roof "skylight" for better ventilation. The factory reserves the right to alter the price, design and equipment without previous notification.
