THIS BULLETIN APPLIES TO THE U.S. AND CANADA REFERENCE: TP 31120/1 (ENGLISH); BODY

# 

Leakage from the left and right guide rails, and the two front rails, can be corrected using the following procedure. (To remedy the situation, the sunroof and guide rails must be removed.)
The sealers to be used are butyl tape (P/N 1277872-6), plastic filler (P/N 1161123-3), and body filler (P/N 277253-1).

## Preparation:

Remove sun visor (2 screws), if applicable

Open sunroof halfway

Remove wind deflector (4 screws)

Unhook clips at front edge of sunroof lining

Push lining back to expose sunroof mounts

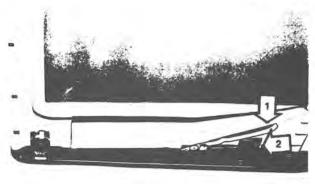

Important that all Service Personnel Read - Circulate and initial

# Removing sunroof

Close sunroof

Push leaf spring (1) to side. Remove screws for front and rear sunroof mounts (4 each side).

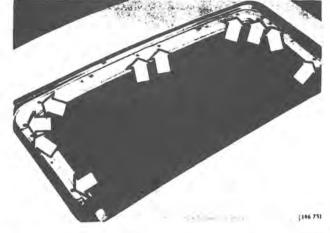

Note: Carefully note position of

rear mount reinforcing plates (2). This will simplify installation.

## Remove:

- crank and gear assembly for sunroof
- cover molding and intermediate sections on guide rails (10 screws - arrows)

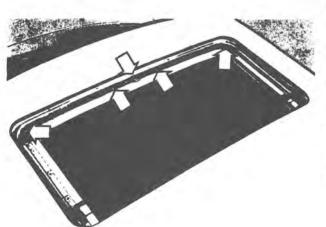

Remove front reinforcing plate for cable guide rails

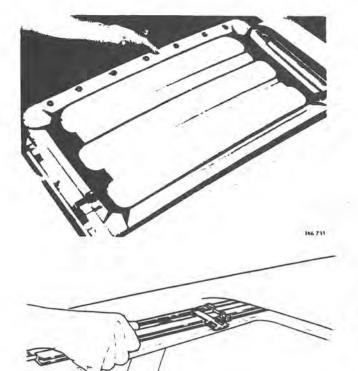

Lift out cables and put to one side

Remove cable guide rails (4 screws)

Clean guide rails thoroughly

Remove nut plates for gear assembly (under guide rails)

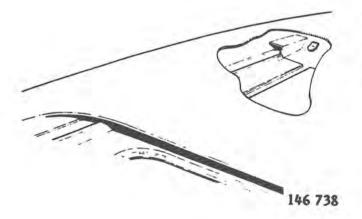

Pull out sunroof liner

Remove guide rails on both sides

Pull guide rails straight out

Note: Guide rails may be stuck in place due to butyl tape in drain channel.

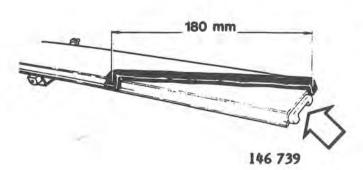

Important: Carefully remove all
butyl tape remaining in guide rails

#### Installation

146 740

Important: Make sure no butyl tape remains on base plate. Thoroughly clean as necessary.

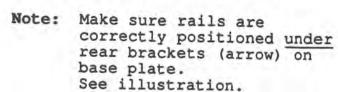

Apply butyl tape, P/N 1277872-6, to guide rails and plastic filler, P/N 1161123-3, on rear mounts

Place a strip of tape (180 mm) diagonally over guide rail. Fold tape up at rear and side, see illustration.

Apply soap solution to butyl tape.

### Install:

- guide rails on both sides.

- sunroof lining

- intermediate sections

Check that no leakage occurs at

Plug holes for both front drain holes. Clamp both rear drain hoses. Pour water in channels on base plate. Check that no water runs past rear section of guide rails and into car.

Unplug all drains.

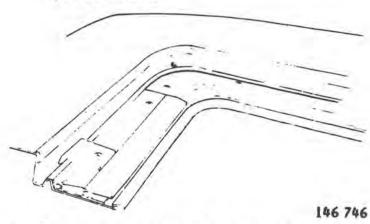

splash guards

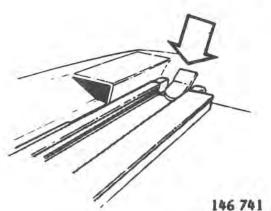

- nut plates for gear assembly

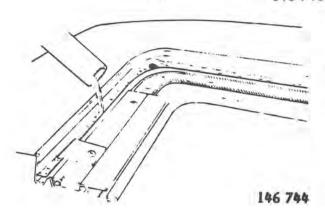

- guide rails for cables

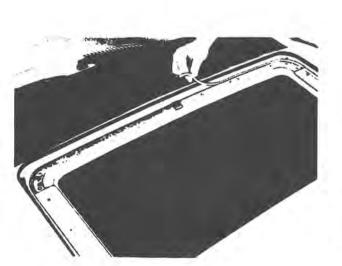

- reinforcing plates for cable guide rails

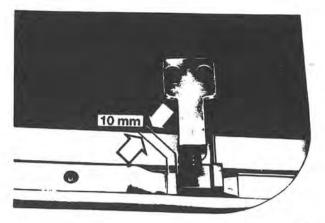

Apply body filler, P/N 277253-1, in space between sunroof channel and cable guide rail. See both illustrations above.

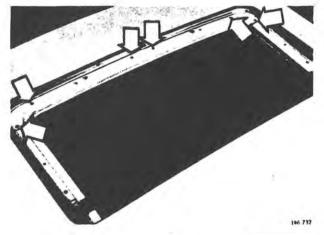

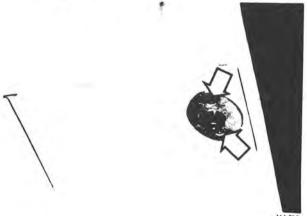

Adjust sunroof mount (10 mm)

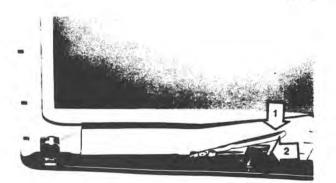

Install cover molding for cables

## Install:

- gear assembly
- cover molding
- crank

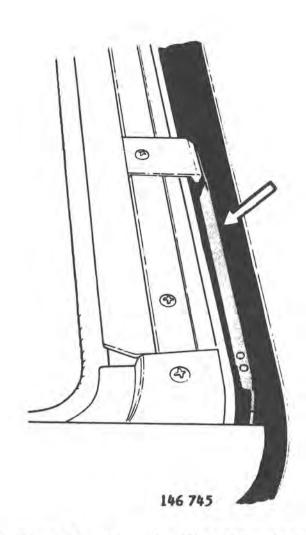

Note: Before installing crank, be sure gear assembly is in start position.

# Install sunroof

Make sure reinforcing plates (2) for rear mounts are correctly positioned.

Put leaf spring (1) into position Reattach front edge of sunroof lining

Install:

- wind deflector

Note: Make sure wind deflector

connecting arms (arrow) are

correctly positioned

between roof and base plate. Water leakage could result if arms contact roof or base

plate.

Install sun visor, if applicable

Check sunroof function.
